

**Notes**  
 1) This set is designed to use the type 200 and 201 tubes with 5-volt 1-amp filaments. The rheostats will not properly control 1/4-amp tubes.

2) On the earliest version of the #3812 TA, the two terminals were labeled TIC rather than P1 and P2.

**VERIFIED SCHEMATIC**  
 The information presented is correct based on comparison with several original sets.
