

The antenna connects to one of two terminals mounted on the board, labeled as shown.

Ground connects directly to the inboard terminal on the Type 11 Tuner.

- Notes**
- 1) A type 200 or 200A tube can be used as the detector.
 - 2) The bypass capacitor from B+ to ground has not been found in any green 4445A. It has been found in black and brown units.

VERIFIED SCHEMATIC
The information presented is correct based on comparison with several original sets.
